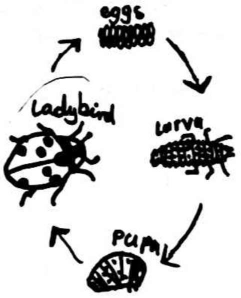
1990 Ladybird Plague

Don't be afraid of these:

They won't bite. It's a Lady bird larva. They hatch from the eggs and grow. When they have grown they split their skins. then they grow ever more and pupate. After a little while they hatch into Ladybirds.
There are many other types of ladybird other than two spots and seven spots.
You can find ladybirds in almost any foliage, especially nettles with aphids. They like the sun so you can often find them sunbathing.
If you find any ladybirds that you don't recognise show them to me.

This is a lifecycle of a



Ladybird.

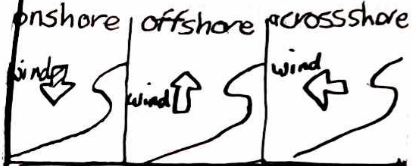
VINDSURFING PART /3/

I learnt how to beach start. Thats when the waters knee deep and the sails above your head. You then put your back foot halfway from the mast to the end of the board. Keep the knee bent then push the sail so its full of wind. Then put on your front foot and sailaway. There are three kinds of winds.



Another meaning for tacking is when going in one direction and you turn 180 degrees and go the other way. To do this you lean the sail to the back of the board and as it turns step round the outside of the sail.
